M3D-C¹ - 2D Mesh Adaptation

- field used for SPR error estimation:
 - $\nabla(\psi_R, \psi_Z)$
- Mesh adaptation after every 10 timesteps
- Case was run for 600 timesteps
- mesh/field(J_φ) are shown at time steps 100, 200, 300, 400, 500
- Results:
 - (a): adapted mesh
 - (b): J_φ solution on adapted mesh
 - (c): J_φ solution on initial mesh
- Initial mesh:
 - Mesh vertices: 1323
 - Mesh edges: 3841
 - Mesh faces: 2519

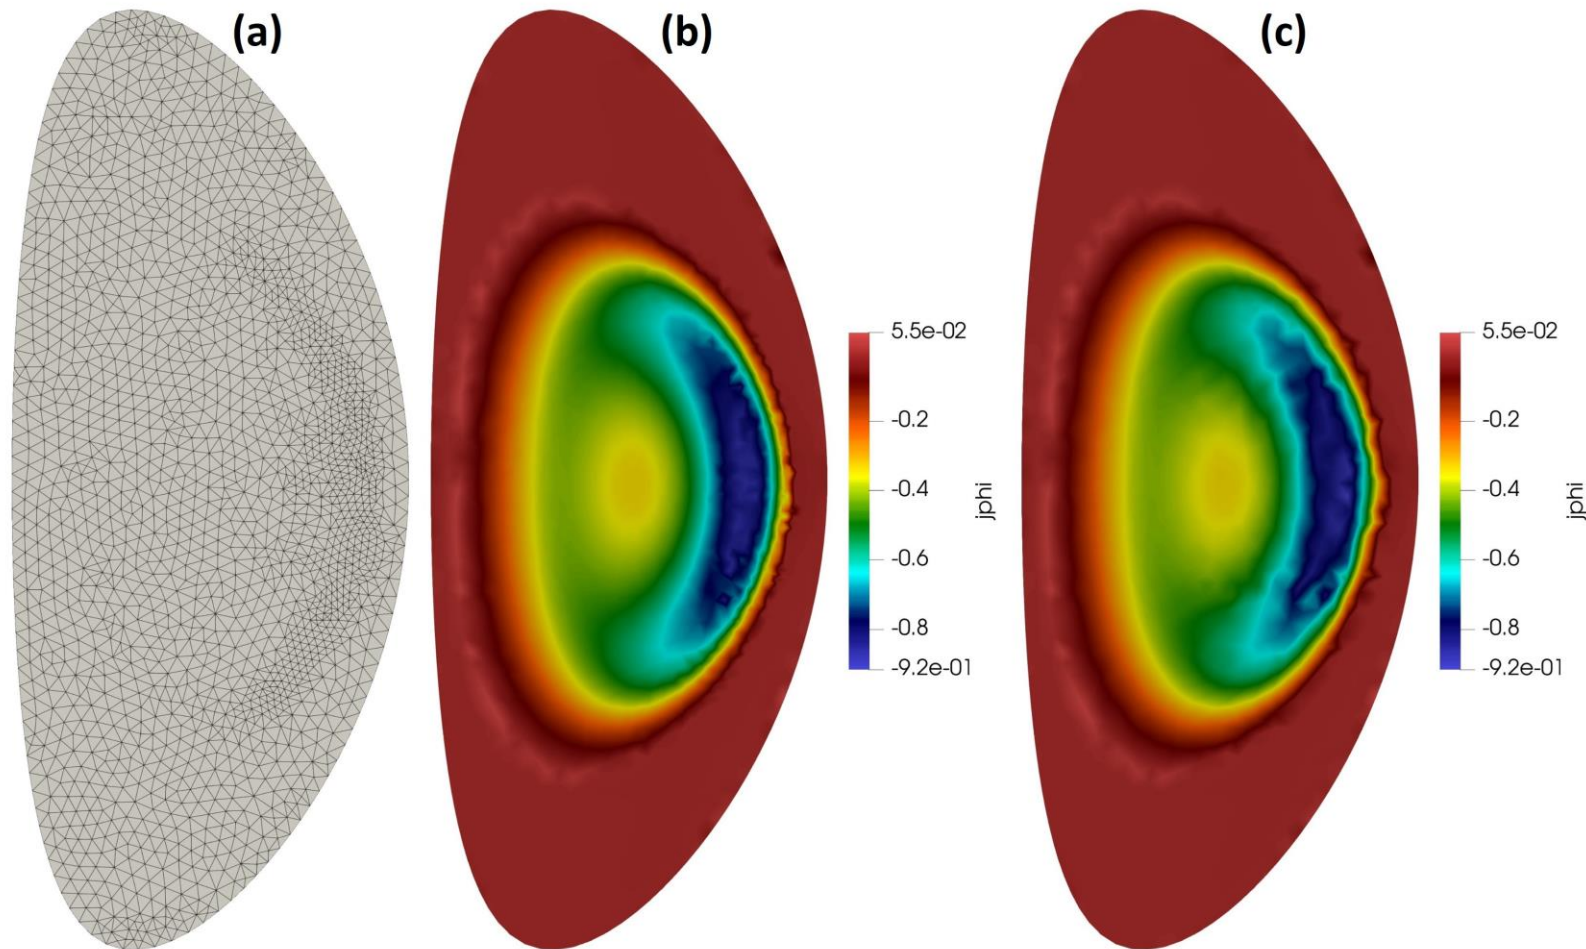

Initial mesh

2D Mesh Adaptation Results – Timestep 100

Timestep = 100

	adapted mesh	Initial mesh
mesh vertices	1829	1323
mesh edges	5359	3841
mesh faces	3531	2519

2D Mesh Adaptation Results – Timestep 200

Timestep = 200

	adapted mesh	Initial mesh
mesh vertices	2470	1323
mesh edges	7282	3841
mesh faces	4813	2519

2D Mesh Adaptation Results – Timestep 300

Timestep = 300

	adapted mesh	Initial mesh
mesh vertices	4560	1323
mesh edges	13552	3841
mesh faces	8993	2519

2D Mesh Adaptation Results – Timestep 400

Timestep = 400

	adapted mesh	Initial mesh
mesh vertices	6043	1323
mesh edges	18001	3841
mesh faces	11959	2519

2D Mesh Adaptation Results – Timestep 500

Timestep = 500

	adapted mesh	Initial mesh
mesh vertices	8676	1323
mesh edges	25900	3841
mesh faces	17225	2519

2D Mesh Adaptation Results – Timestep 600

Timestep = 600

	adapted mesh	Initial mesh
mesh vertices	28423	1323
mesh edges	85138	3841
mesh faces	56716	2519
